

Consumir para trabajar: Consumo de psicotrópicos y analgésicos por motivos laborales y potenciadores del rendimiento laboral en la población asalariada española

Consuming to work: Psychotropic and analgesic drug use for work-related reasons and performance-enhancing substances in the salaried population in Spain

Research team: Laura Esteve Matalí, Albert Navarro Giné,
Mariona Portell Vidal, Pedro Ferrer Rosende.

Period: 2022-2023.

Funder: Fundación Prevent.

High levels of psychotropic medication and analgesic use in Spain constitute a major public health concern. Recognising employment as a key social determinant of health, this project quantifies the contribution of work to medication use among salaried workers and examines work-organisation factors associated with that use, identifying differences by sex and occupational social class.
