

BIOCONTROL

Results. Right now.

Introducing VIP Gold™

The new VIP Gold™ merges advanced particle technology, highly specific antibodies and an innovative multi-test format to provide increased lab efficiencies and rapid, accurate detection of food-borne pathogens.

Improved Lab Efficiency

- VIP Gold offers an innovative multi-test format with break-away devices designed for maximum flexibility and ideal for low and high volume test days.
- Reduces set up time required with individual lateral flow devices or strips.
- 2 x 10 test device layout facilitates quick and easy transfer of sample to device and efficient data recording.

Advanced Technology

- Cutting edge particle technology allows for faster sample flow, producing a clean background and crisp, clear lines.
- Simple, easy to read lines provide unambiguous results.
- Superior housing design protects the test strip and ensures even and consistent sample flow.

Reduced Testing Costs

- Easy 1-step enrichments for *Listeria* and *E. coli* O157:H7 eliminate sample transfers and reduce labor.
- Simple assay protocol requires minimal hands-on time.
- No additional capital equipment such as readers, washers, etc...

Reduce your pathogen testing costs.

VIP Gold for *Listeria*

The new labor saving, single-step enrichment protocol eliminates sample transfers reducing hands-on time and saving money. Specifically validated for both food and environmental samples, it's the ideal test for HACCP programs.

AOAC Official Method 997.03; Performance Tested Method 060801

VIP Gold for EHEC

Accurate, simple and rapid. Results are available in as few as 8 hours. Specifically validated for a variety of sample matrices including raw beef, produce, and fruit juice.

AOAC Official Method 996.09

VIP Gold for *Salmonella*

This innovative single use test for *Salmonella* provides next-day results for processed food samples.

AOAC Official Method 999.09
