

# Microbiology Standards

The Simple Way to Ensure Accurate Results, Every Time

## Vitroids™ and LENTICULE® Discs

Defined CFU range and low standard deviation

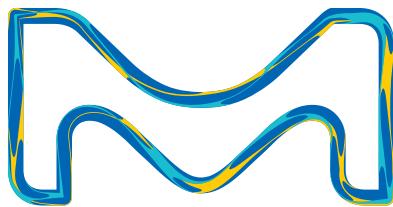

Fast, reliable and easy to use

Produced in double accredited laboratory fulfilling  
ISO/IEC 17025 and  
ISO 17034

Derived from CECT® strains

The Life Science business  
of Merck operates as  
MilliporeSigma in the  
U.S. and Canada.

Filtration & Monitoring Products

# The Simple Way to Ensure Accurate Results, Every Time

## Certified Reference Microorganisms

### Why use CRMs in Microbiology?

In pharmaceutical, food, water, and environmental microbiology, laboratory results are an important part of a wider process that helps to confirm that samples are of an acceptable microbiological quality, are safe and comply with relevant legislation or guidelines. Quality control is an essential element of a laboratory's quality assurance system and characterized authenticated reference materials are necessary for effective quality control.

The same is true of microbiological testing; the one factor that is repeatedly overlooked is careful sourcing of biological resources such as the quality control strains. Incorrect quality control materials may indicate that test results are acceptable when, in fact, there is a problem with the samples being tested. Alternatively, control results may indicate that a test is not performing correctly, instigating unnecessary investigations and repeat testing.

Ready-to-use microbiological controls minimize the need for maintaining control strains in the test laboratory and guarantee that an authenticated control culture is used for every quality control test. Such control materials must be fit-for-purpose, bearing in mind that for pharmaceutical, food, water, and environmental samples, the ability to accurately and reliably enumerate microorganisms—often at relatively low numbers—is essential. It is also important that

controls can be applied to the wide range of different matrices that are often tested in a single laboratory.

The application of a unique preservation technology involving controlled-drying of authenticated cultures of internationally accepted microbiology control strains has resulted in the production of single-use discs containing microorganisms, designed for use in pharmaceutical, food, water and environmental testing laboratories. These quality control materials, LENTICULE® discs (developed by UK Health Security Agency, UKHSA) and Vitroids™ (developed by us), are now manufactured by our company under conditions compliant with ISO 17034.<sup>1</sup> The discs contain pure cultures of bacteria, yeasts, or molds in a solid water-soluble matrix. Comprehensive certificates of analysis provide details about the mean number of colony forming units (CFU) per disc, the method used to determine the product data, and the number of subcultures from the original strains provided under licence by NCTC® and CECT®.

Single-use controls manufactured directly from cultures provided by recognized Biological Resource Centres (BRCs) such as NCTC® and CECT®, mean that laboratories can be confident about the authenticity of their strains and the suitability of their quality control materials; factors that are of increasing importance as laboratories become more automated and new technologies emerge and are rapidly adopted in routine microbiology settings.

### What are Vitroids™ and LENTICULE® discs?

Vitroids™ and LENTICULE® discs contain viable microorganisms in a certified quantity (generally accredited according ISO/IEC 17025,<sup>9</sup> General requirements for the competence of testing and calibration laboratories), produced under reproducible conditions compliant with ISO 17034:2016 using authenticated strains from NCTC®, NCPF® and CECT®. Consisting of pure cultures of bacteria, fungi, or yeasts in a solid water soluble matrix, they are stable for at least 16 months and are in a viable state with a shelf life of 16-24 months. The within-batch variation for every product is very low. Each batch is provided with a comprehensive certificate of analysis that specifies the mean number of colony forming units (CFU), an expanded uncertainty about the mean, details about the method used to determine the product data and the number of passages (subcultures) from the original strain (maximum 3 passages from original strain).

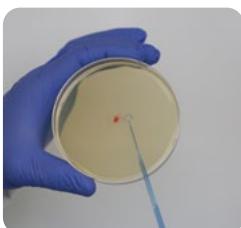

## Applications

- Daily quality control
- Performance testing of media acc. ISO 11133<sup>2</sup>
- Validation of new methods (e.g. acc. ISO 16140 series<sup>3,4,5,6,7,8</sup>)
- Materials for proficiency testing or ring trials
- Method development
- Staff training
- Starter cultures

## Stability

### Certified Reference

Microorganisms in this unique format are very stable and in most cases will remain so for many years at -20 °C. The numbers of CFUs do not change, the organisms need no recovery time and have no lag phase. Even a short period at ambient temperature, such as during shipment, is not an issue for product stability.

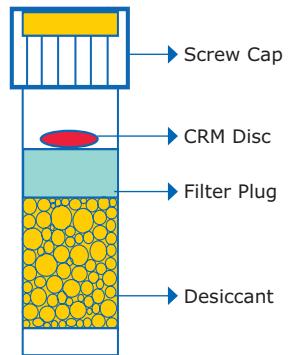

## Improved Stability, Performance, and Ease of Use (and re-locate stability section below)

Utilization of new technology has allowed us to make major improvements in the field of Microbiological Reference Materials. The main areas of development are stability, temperature resistance, adjusting the narrow defined CFU range, rehydration time, and better within batch reproducibility. In addition, each disc is certified according to ISO 17034<sup>1</sup> and ISO/IEC 17025.<sup>9</sup>

## Preparation

Most solid and liquid media or rehydration buffers can be used. Discs can be rehydrated in as little as 100 µL buffer, or in larger volumes, e.g. 100 mL medium. It is also possible to add the disc to a cooled molten medium used for pour plate techniques. The rehydration process takes approximately 10 minutes. On solid media, the disc forms a droplet that can be spread with a sterile loop. In liquid media, the disc dissolves very quickly.

Vitroids™ and Lenticules® disc packaging

## Packaging

The discs are packed individually in vials. The vials have a special screw-cap with seal and contain a desiccant at the bottom. The vials are packed in a mylar bag with a zip.

## Strains

LENTICULE® discs are prepared from a traceable culture obtained freeze-dried from the National Collection of Type Cultures (NCTC®) or National Collection of Pathogenic Fungi (NCPF®) and are manufactured under license and control from UKHSA.

Vitroids™ are derived from a traceable culture obtained freeze-dried from CECT and produced according to our patented technology. Both NCTC® and CECT® strains are conveniently matched to WDCM numbers and have CFU ranges that closely align with ISO 11133<sup>2</sup> (Preparation, production, storage, and performance testing of culture media).

## Test strains used for performance testing

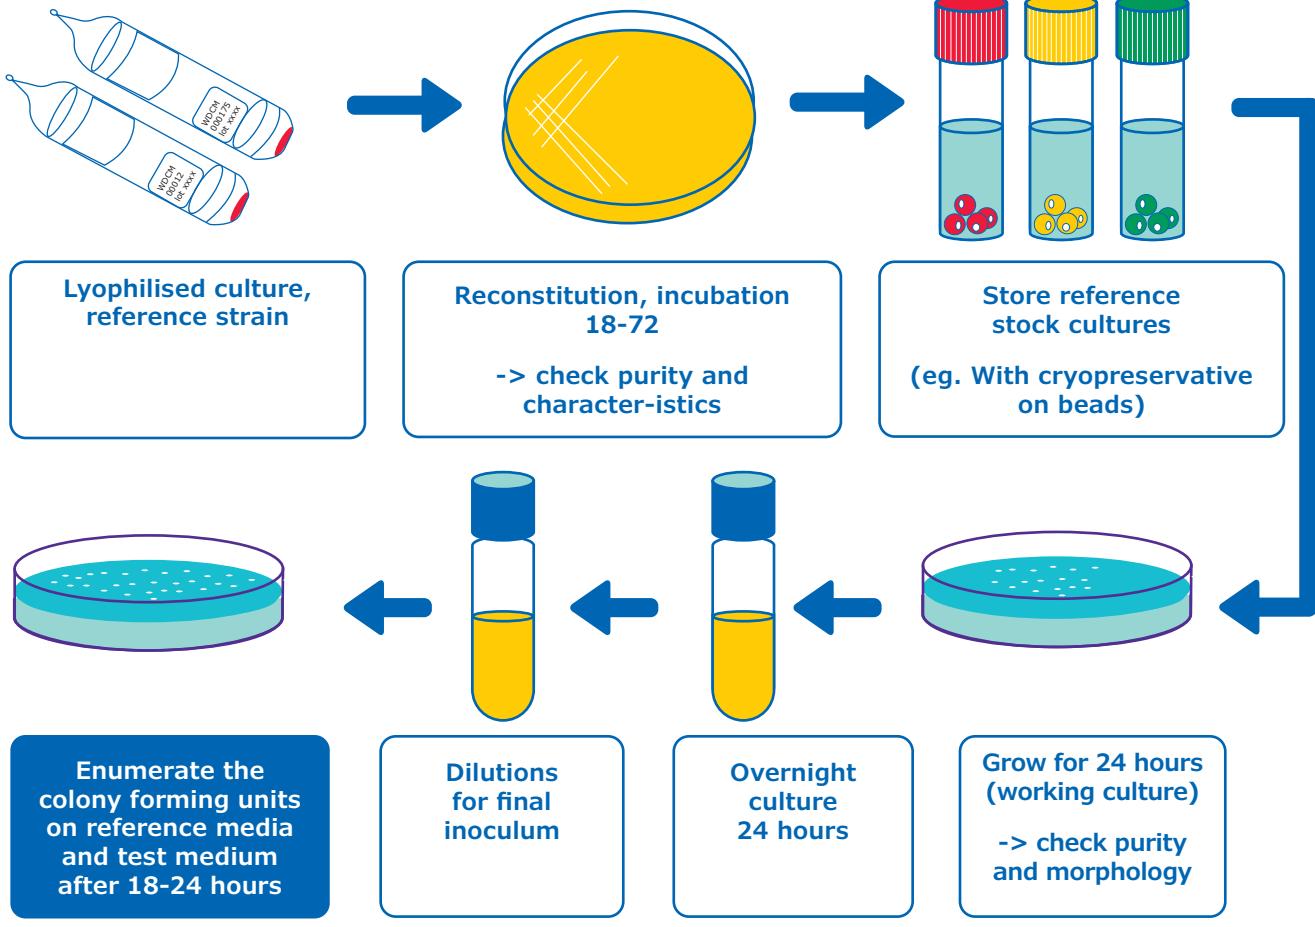

### Traditional Way

#### Costs:

- Lyophilized cultures
- Reagents
- Consumables
- Energy

#### Time needs:

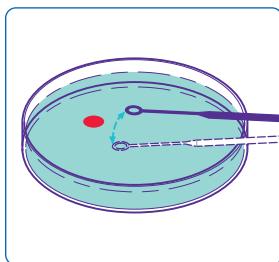

- Hands on time
- Documentation
- incubation

### New Way

#### Using Vitroids™ and Lenticule® discs:

- More accuracy
- Save time & costs
- Easy handling
- No stock culture maintenance
- Less documentation

Tap and tip onto culture plate or into buffer or liquid media. Wait 10 minutes! Streak out, pour it or filter it

Enumerate the colony forming units after 18-24 hours

## Save Time and Costs

Using Vitroids™ and LENTICULE® discs is time saving because it removes the need for preparing stock cultures. The organisms do not require recovery time or pre-enrichment step. In addition the product concentrations are designed in a range where no or only minimal dilutions are needed. The discs readily dissolve in liquid media and on agar plates resulting in easy handling and a very economical solution.

### Time Savings

Traditional Methods	Hands on time
Choose and purchase test organisms	5.0 min
Resuscitation and purity check	22.8 min
Preparation of reference stocks	4.4 min
Preparation of stock cultures	10.0 min
Preparation of working cultures	0.7 min
Preparation of over-night culture	0.7 min
Preparation of suspensions (inocula) for the test	7.6 min
Testing of inoculum, serial dilutions	13.8 min
Quantitative/Qualitative Testing	✓
<b>Hands on time</b>	<b>65.0 min</b>

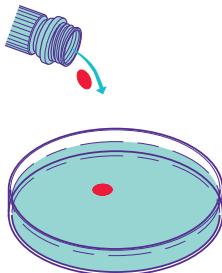

Certified reference material with required final inoculum	Hands on time
Choose and purchase test organisms	5.0 min
Remove the tubes from the freezer	0.7 min
Allow the discs to reach ambient temperature (15 min)	0.0 min
Open the tube and remove the discs by inverting the tube over the medium/buffer to be used	0.7 min
Leave at room temperature to rehydrate (15 min)	0.0 min
Quantitative/Qualitative Testing	
<b>Hands on time</b>	<b>6.4 min</b>

## Examples for Inoculation

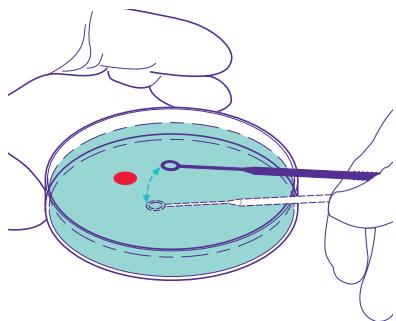

Vitroids™ and LENTICULE® discs are as available as small water-soluble discs, making your inoculum preparation exceptionally easy.

### The discs can be used to directly inoculate solid media by following these steps:

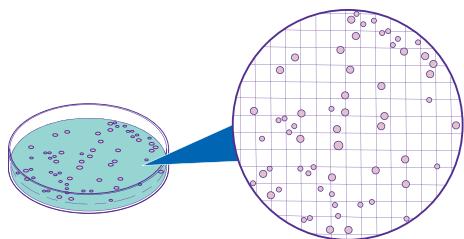

1. Take the tube(s) containing the disc(s) from the freezer and allow it to reach ambient temperature (5 to 10 minutes) before use. Do not refreeze. Use the disc(s) within one hour of transferring to ambient temperature.
2. Open the tube and remove the discs by inverting the tube over the solid medium.

3. Leave the discs on the surface of the medium at room temperature to rehydrate. After 10 to 15 minutes ensure that the disc is completely dissolved.

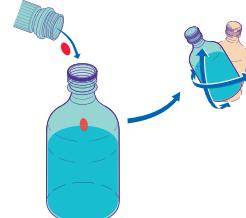

4. Spread the drop over the entire plate.
5. Test and incubate the sample following routine enumeration procedures.

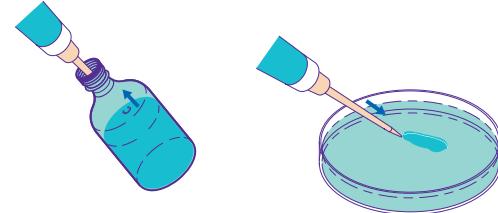

### The discs can be rehydrated in buffer / liquid media before use :

If the disc has a higher concentration or is used to inoculate liquid media, the Vitroids™ and LENTICULE® discs can be rehydrated in liquid medium or buffer, respectively. Do not rehydrate the discs directly in distilled water.

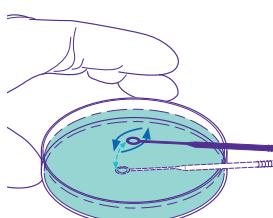

1. Remove the tube(s) from the freezer and allow the disc(s) to reach ambient temperature (5 to 10 minutes) before use. Do not refreeze. Use the disc(s) within one hour after transferring to ambient temperature.
2. Open the tube and remove the discs by inverting the tube over the buffer or medium to be used. Shake gently and leave inoculated buffer/media at room temperature for 10 to 15 minutes. Shake gently again.

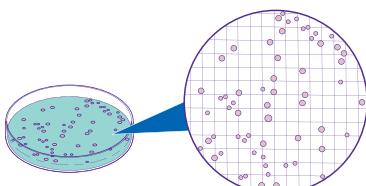

3. Apply the inoculum onto an agar plate.

4. Spread the drop over the entire plate

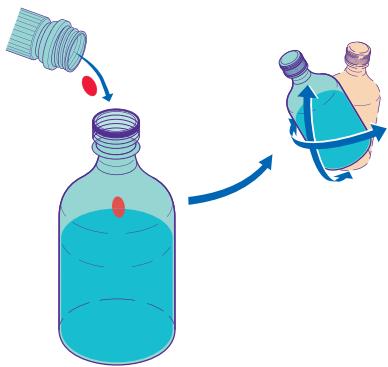

5. Test and incubate the sample following routine enumeration procedures.

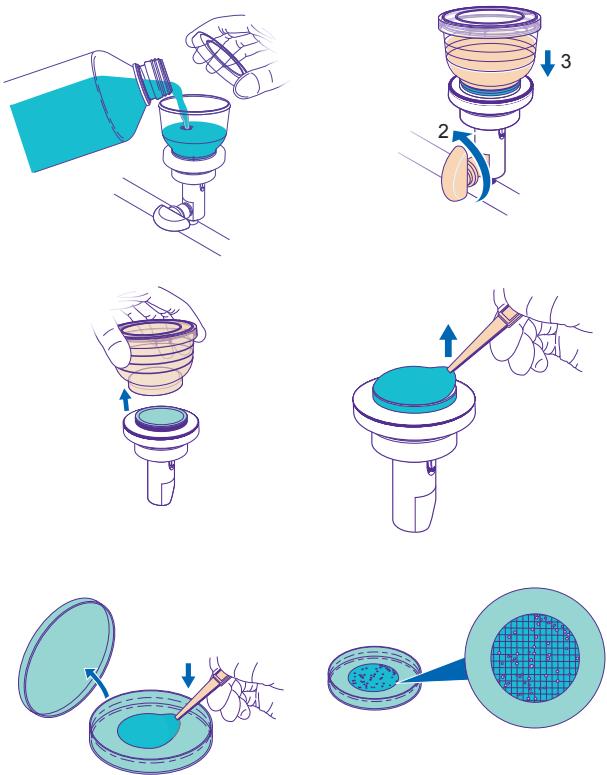

### **Procedure to use the discs for membrane filtration:**

If the discs are used for membrane filtration, the Vitroids™ and LENTICULE® discs can be rehydrated in sterilized tap water or buffer or dilution solvent, respectively. Do not rehydrate the discs directly in distilled water.

1. Remove the tube(s) from the freezer and allow the disc(s) to reach ambient temperature (5 to 10 minutes) before use. Do not refreeze. Use the disc(s) within one hour after transferring to ambient temperature.
2. Open the tube and remove the discs by inverting the tube over the buffer or medium to be used. Shake gently and leave inoculated buffer/media at room temperature for 10 to 15 minutes. Shake gently again.

3. Test and incubate the sample following routine enumeration procedures.

# Certificate of Analysis (CoA)

Our Certified Reference Microorganisms come with a Certificate of Analysis (CoA) as well as certain data to characterize the reference strain, its cfu count uncertainty, and traceability information.

**Characterization:** For characterization, the homogeneity and stability assessment, separately performed for each CRM, is given on the certificate, along with the geometric mean value of the cfu count including the method used to perform the test. These are the metrological measurement data of the CRM. The identification method is also stated, based on classical microbiological or biochemical tests and MALDI-TOF-MS analysis.

**Uncertainty:** Standard deviation of the cfu number is determined and, from this, an expanded uncertainty and an expected range (+/- 2SD) calculated. The calculation is explained in detail on the CoA. At least 95% of the CFU values of the discs are guaranteed to lie within the expected range. These values take into

account all possible errors from production up to the analysis of the CRMs.

**Traceability:** Each CRM needs to be traceable, in our case back to a batch of a specific reference strain from NCTC®, NCPF® or CECT®, our national culture collection partners. The number of passages, the traceability of identification and the metrological measurement data are documented in the certificate.

**Instructions:** The CoA also states the intended uses and gives details about the possible reconstitution and inoculation methods.

The certificate has a specific accreditation stamp from the Swiss Accreditation Service SAS, designating our company as a reference material producer under no. SRMS 0001 in accordance with international standard ISO 17034. At its end, each certificate is signed by the responsible production manager and the responsible QC approver.

## Certified reference material – Vitroids™ Reference material certificate

### ***Clostridium sporogenes WDCM 00008 VT000082***

<b>Product no.:</b>	<b>VT000082</b>
<b>Lot no.:</b>	<b>BCCK2303</b>
<b>Description of CRM:</b>	Vitroids™ are disc-shaped, microbiological reference materials. Each disc contains a quantified number of microorganisms (colony forming units; cfu), immobilized in a solid water soluble matrix.
<b>Expiry date:</b>	<b>MAR 2025</b>
<b>Storage:</b>	<b>-20 ± 5 °C; store the mylar bag containing the plastic vials with the Vitroids™ unopened</b>
<b>Starting material:</b>	<b>CECT 485 batch 04-09-2014</b> (freeze-dried microorganism in a glass ampoule)
<b>No. of passages:</b>	<b>2</b> (upon receipt from cell culture collection CECT)

<b>Sample: Clostridium sporogenes WDCM 00008 VT000082</b>		
<b>Certified value (geometric mean value)</b>	<b>Expanded uncertainty (<math>\log_{10}</math> value)</b>	<b>Expected range</b>
<b>2.7E+01 cfu per disc</b>	0.033	<b>1.3E+01 - 5.6E+01 cfu per disc</b>
Conditions:	<b>Trypcase soy agar / anaerobic / 37 °C / 48 hrs</b>	
Date of testing:	27 MAR 2023	

**cfu:** colony forming units  
The reference values are calculated by (US EPA Environmental Systems Monitoring Laboratory in Cincinnati) EMSL-CIN's computer program "BIWEIGHT". The measurement of uncertainty originates from the generated biweight standard deviation (SD) resulting from the biweight geometric mean value obtained during homogeneity testing. The expected range takes into account media batch to batch variability, which is done by multiplying the biweight standard deviation by 1.6.

<b>Metrological traceability:</b>	Details see "Certification process details" on page 2.
<b>Measurement method:</b>	The certified value is established by plate counting in accordance with ISO/IEC 17025 <sup>[1]</sup> .
<b>Intended, correct use &amp; handling instructions:</b>	Please follow the instructions given in "General instructions for intended uses of this reference material" on page 3.
<b>Health and safety information:</b>	Please refer to the Safety Data Sheet (link on page 3) for detailed information about the nature of any hazard and appropriate precautions to be taken.
<b>Accreditation:</b>	Sigma-Aldrich Production GmbH is accredited by the Swiss Accreditation Service SAS as reference material producer under no. SRMS 0001 in accordance with international standard ISO 17034 <sup>[2]</sup> .

**Certificate issue date:** **24 APR 2023**

**ISO 17034  
SRMS 0001**

# A Strong Partnership

UKHSA's NCTC® is a national BRC that preserves, maintains and regularly updates a specific collection of bacterial strains, ensuring there are no changes to physical characteristics, such as morphology and nutritional requirements, the genome and the proteome. It is one of several BRCs that provide authenticated biological reference and control strains. In addition, the UKHSA also developed the LENTICULE® disc that enables a laboratory to have an on demand source of a control for quantitative microbiology.

With increased worldwide demand for the accreditation of testing labs, as well as the development of fast, automated methods in microbiology, the use of Microbial Certified Reference Materials has increased substantially. With this in mind, it is an appropriate

time to entrust the manufacture and distribution of these products to an ISO accredited manufacturing company such as ours, enabling the UKHSA organization to focus on research and development for new products to add to this portfolio. This R&D is further enhanced by an exciting project by UKHSA, in collaboration with the Wellcome Trust Sanger Institute, to provide whole genome sequences using long-read technology for 3000 bacteria of clinical importance.

An integral part of this partnership is our creation of a dedicated manufacturing facility in Buchs, Switzerland to provide the growth and development of Certified Reference Microorganisms, both for now and for the future. It will enable more scientists worldwide to easily access the NCTC®/NCPF® CRMs through our global supply chain.

Our facility in Buchs,  
Switzerland.

## Microbial quality control in food according to EN ISO 11133

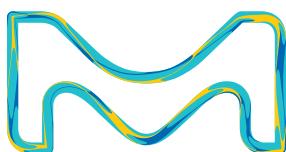

Culture media and certified reference materials

As a worldwide leading provider of industrial microbiology solutions, we address the needs of customers in industries where consumer safety is a major concern. Food manufacturing is particularly sensitive due to the potentially grave consequences that product contamination may have on the health of consumers. To minimize the risk, increasingly stringent standards are being set around the globe to regulate the production of food.

With the food industry frequently facing new or changed guidelines, staying up-to-date with regulatory requirements is challenging. The EN ISO 11133:2014 standard entitled "Microbiology of food, animal feed and water — Preparation, production, storage and performance testing of culture media" describes the general methodology and specifications for the preparation and performance testing of culture media for laboratory testing, while newer ISO standards for specific microorganisms published after 2014 may contain updated culture media formulations and/or quality control (QC) procedures.

For tests according to ISO 11133:2014, culture media and reference materials must fulfil specific quality requirements. Our range of regulatory compliant culture media makes it easier for you to stay compliant and remain one step ahead in microbial testing.

This flyer lists our most commonly used culture media for compliance with ISO 11133 (in GranuCult<sup>®</sup> prime, NutriSelect<sup>®</sup> prime or Chromocult<sup>®</sup> format) and the corresponding QC strains, available as convenient ready-to-use Vitroids<sup>™</sup> and LENTICULE<sup>®</sup> discs.

## Dehydrated culture media

Our broad range of high-quality dehydrated culture media products for the food industry ensures you will find the right medium for your needs and achieve accurate testing results. We have recently restructured our portfolio, as a consequence of which our dehydrated culture media fall under two main trademarks and three QC levels. This makes it easier for you to find the right medium with the required regulatory compliance.

The NutriSelect® brand covers our broad range of powdered culture media, while the GranuCult® brand represents our superior granulated culture media. The three QC levels **basic, plus and prime** as new brand extensions clearly indicate the degree to which these culture media are compliant. The prime level covers the full compliance spectrum according to F&B and pharma standards and includes QC release under ISO 17025 accreditation for culture media described in F&B standards.

## Certified Reference Materials

Authenticated reference materials are necessary for effective QC in the laboratory, and this includes biological resources such as microbial QC strains. Ready-to-use microbiological controls minimize the need for maintaining control strains in the test laboratory and guarantee that an authenticated control culture is used for every test. Such control materials must be fit-for-purpose, bearing in mind that for food samples, the ability to accurately and reliably enumerate microorganisms—often at relatively low numbers—is essential. It is also important that controls can be applied to the wide range of different matrices that are often tested in a single laboratory.

A unique preservation technology involving the controlled drying of authenticated cultures of internationally accepted control strains has resulted in the production of single-use discs containing microorganisms that are suitable for quality testing of culture media according to ISO 11133. These quality control materials, the LENTICULE® and Vitroids™ discs, are manufactured in our ISO/IEC 17025 and ISO 17034 accredited lab in Buchs, Switzerland. The discs contain pure cultures of bacteria, yeasts or molds in a solid water-soluble matrix. Comprehensive certificates of analysis provide details about the mean number of colony forming units (CFU) per disc, the method used to determine the product data, and the number of subcultures from the original strains provided under license by NCTC® and CECT®. The products are designed with a range of CFU concentrations to ensure either no or only minimal dilution steps are required, thereby saving time and reducing the likelihood of cross-contamination.

## Culture media and control stain product information

The following table lists most of the culture media mentioned in ISO 11133 in alphabetical order. The first column describes the culture media product, the second its catalogue number. In the following columns, the control strains that are mandatory according to 11133 and the suggested microbiological CRMs are shown. The table also helps to find the products with the best suited CFU range for the corresponding test.

Note that the table contains neither all our media and strains available nor all the media and strains mentioned in ISO 11133. It lists a selection of the most commonly used media and the recommended strains. Our full portfolio can be found on our website [SigmaAldrich.com/culture-media](http://SigmaAldrich.com/culture-media)

		<i>Enterococcus faecalis</i>	sel. qual.	00009	VT000097	50,000-150,000
BRILA (Brilliant-green bile Lactose) broth acc. ISO 4831, ISO 4832 and FDA-BAM, GranuCult® prime	105454	<i>Escherichia coli</i>	prod. qual.	00012	VT000122	15-80
		<i>Enterococcus faecalis</i>	sel. qual.	00009	VT000097	50,000-150,000
Buffered Peptone Water acc. ISO 6579, 19250, ISO 21528, ISO 22964, ISO 6887, FDA-BAM and EP, GranuCult® prime	107228	<i>Salmonella Enteritidis / Typhimurium</i>	prod. qual.	00031	VT000312	15-80
		<i>Escherichia coli</i>	prod. qual.	00012	VT000122	15-80
		<i>Staphylococcus aureus</i>	prod. quant.	00034	VT000342	15-80
		<i>Listeria monocytogenes 4b</i>	prod. quant.	00021	VT000212	15-80

Culture media	Cat. No.	Control strain acc. ISO	Test method*	WDCM	Suggested CRM	CFU range
Coliform agar acc.to ISO 9308-1, Chromocult®	<b>110426</b>	<i>Escherichia coli</i>	prod. quant.	00012	VT000123	80-130
		<i>Enterobacter aerogenes</i>	prod. quant.	00175	VT001753	80-130
		<i>Citrobacter freundii</i>	prod. quant.	00006	VT000063	80-130
		<i>Enterococcus faecalis</i>	sel. qual.	00009	VT000097	50,000-150,000
		<i>Pseudomonas aeruginosa</i>	spec. qual.	00025	VT000256	1,000-10,000
FRASER broth (base) acc. ISO 11290, GranuCult® prime	<b>110398</b>	<i>Listeria monocytogenes</i>	prod. qual.	00021	VT000212	15-80
		<i>Escherichia coli</i>	sel. qual.	00012	VT000127	50,000-150,000
		<i>Enterococcus faecalis</i>	sel. qual.	00009	VT000097	50,000-150,000
GIOLITTI-CANTONI broth (base) acc. ISO 6888, GranuCult® prime	<b>110675</b>	<i>Staphylococcus aureus</i>	prod. qual.	00034	VT000342	15-80
		<i>Escherichia coli</i>	sel. qual.	00012	VT000127	50,000-150,000
Glucose OF (Oxidative/Fermentative) medium (base) acc. ISO 21528 and FDA-BAM, GranuCult® prime	<b>103865</b>	<i>Escherichia coli</i>	prod. quant.	00012	VT000123	80 - 130
		<i>Pseudomonas aeruginosa</i>	spec. qual.	00025	VT000256	1,000-10,000
Half FRASER (Demi FRASER) broth (base) with antibiotics acc. ISO 11290, GranuCult® prime	<b>100025</b>	<i>Listeria monocytogenes</i>	prod. qual.	00021	VT000212	15-80
		<i>Escherichia coli</i>	sel. qual.	00012	VT000127	50,000-150,000
		<i>Enterococcus faecalis</i>	sel. qual.	00009	VT000097	50,000-150,000
Lauryl Sulfate broth acc. ISO 4831, ISO 7251 and FDA-BAM, GranuCult® prime	<b>110266</b>	<i>Escherichia coli</i>	prod. qual.	00012	VT000122	15-80
		<i>Citrobacter freundii</i>	prod. qual.	00006	VT000062	15-80
		<i>Enterococcus faecalis</i>	sel. qual.	00009	VT000097	50,000-150,000
Listeria agar (base) acc. OTTAVIANI and AGOSTI acc. ISO 11290, Chromocult®	<b>100427</b>	<i>Listeria monocytogenes</i>	prod. quant.	00021	VT000213	80-130
		<i>Escherichia coli</i>	sel. qual.	00012	VT000127	50,000-150,000
		<i>Enterococcus faecalis</i>	sel. qual.	00009	VT000097	50,000-150,000
MKTTn (MULLER-KAUFFMANN Tetrathionate Novobiocin) broth (base) acc. ISO 6579, GranuCult® prime	<b>105878</b>	<i>Salmonella Enteritidis</i>	prod. qual.	00030	VT000302	15-80
		<i>Escherichia coli</i>	sel. qual.	00012	VT000127	50,000-150,000
		<i>Pseudomonas aeruginosa</i>	sel. qual.	00025	VT000257	50,000-150,000
		<i>Enterococcus faecalis</i>	sel. qual.	00009	VT000097	50,000-150,000
MMGA (Mineral Modified Glutamate) agar acc. ISO 16649, GranuCult® prime	<b>109045</b>	<i>Escherichia coli</i>	prod. quant.	00012	VT000123	80-130
		<i>Enterococcus faecalis</i>	sel. qual.	00009	VT000097	50,000-150,000
		<i>Citrobacter freundii</i>	spec. qual.	00006	VT000066	1,000-10,000
		<i>Pseudomonas aeruginosa</i>	spec. qual.	00025	VT000256	1,000-10,000
		<i>Escherichia coli</i>	prod. qual.	00202	CRM13216L	30-120
MSRV (Modified Semi-solid RAPPAPORT-VASSILIADIS) medium (Base) acc. ISO 6579, NutriSelect® prime	<b>109878</b>	<i>Salmonella Enteritidis</i>	prod. qual.	00030	VT000302	15-80
		<i>Escherichia coli</i>	sel. qual.	00012	VT000127	50,000-150,000
		<i>Enterococcus faecalis</i>	sel. qual.	00009	VT000097	50,000-150,000
MYP (Mannitol egg yolk polymyxin) agar (base) acc. ISO 7932, ISO 21871 and FDA-BAM, GranuCult® prime	<b>105267</b>	<i>Bacillus cereus</i>	prod. quant.	00001	VT000013	80-130
		<i>Escherichia coli</i>	sel. qual.	00012	VT000127	50,000-150,000
		<i>Bacillus subtilis</i> subsp. <i>spizizenii</i>	spec. qual.	00003	VT000036	1,000-10,000
Nutrient agar acc. ISO 6579, ISO 10273 and ISO 21528, GranuCult® prime	<b>105450</b>	<i>Salmonella Enteritidis</i>	prod. quant.	00030	VT000303	80-130
		<i>Escherichia coli</i>	prod. qual.	00012	VT000123	80-130
PEMBA (Polymyxin Pyruvate Egg yolk Mannitol Bromothymolblue Agar) (base) acc. ISO 21871, GranuCult® prime	<b>120589</b>	<i>Bacillus cereus</i>	prod. qual.	00001	VT000013	80-130
		<i>Escherichia coli</i>	sel. qual.	00012	VT000127	50,000-150,000
		<i>Bacillus subtilis</i> subsp. <i>spizizenii</i>	spec. qual.	00003	VT000036	1,000-10,000
Peptone salt solution (Maximum recovery diluent) acc. ISO 6887 and ISO 8199, GranuCult® prime	<b>112535</b>	<i>Escherichia coli</i>	prod. quant.	00012	VT000122	15-80
		<i>Staphylococcus aureus</i>	prod. quant.	00034	VT000342	15-80
Plate Count agar acc. ISO 4833, ISO 17410 and FDA-BAM, GranuCult® prime	<b>105463</b>	<i>Bacillus subtilis</i> subsp. <i>spizizenii</i>	prod. quant.	00003	VT000033	80-130
		<i>Escherichia coli</i>	prod. quant.	00012	VT000123	80-130
		<i>Staphylococcus aureus</i>	prod. quant.	00034	VT000343	80-130
Plate Count skimmed milk agar acc. ISO 4833 and ISO 17410, GranuCult® prime	<b>115338</b>	<i>Bacillus subtilis</i> subsp. <i>spizizenii</i>	prod. quant.	00003	VT000033	80-130
		<i>Escherichia coli</i>	prod. quant.	00012	VT000123	80-130
		<i>Staphylococcus aureus</i>	prod. quant.	00034	VT000343	80-130

Culture media	Cat. No.	Control strain acc. ISO	Test method*	WDCM	Suggested CRM	CFU range
Pseudomonas CFC/CN agar (base) acc. ISO 13720 and ISO 16266, GranuCult® prime	107620	<i>Pseudomonas aeruginosa</i>	prod. quant.	00024	VT000243	80-130
		<i>Escherichia coli</i>	sel. qual.	00012	VT000127	50,000-150,000
		<i>Enterococcus faecalis</i>	sel. qual.	00009	VT000097	50,000-150,000
RVS (RAPPAORT-VASSILIADIS-Soya) broth (base) acc. ISO 6579, GranuCult® prime	107700	<i>Salmonella Typhimurium</i>	prod. qual.	00031	VT000312	15-80
		<i>Escherichia coli</i>	sel. qual.	00012	VT000127	50,000-150,000
		<i>Pseudomonas aeruginosa</i>	sel. qual.	00025	VT000257	50,000-150,000
		<i>Enterococcus faecalis</i>	sel. qual.	00009	VT000097	50,000-150,000
Selenite Cystine (SC) broth acc. ISO 6579 and FDA-BAM (contains sodium selenite), GranuCult® prime	100212	<i>Salmonella Typhimurium</i>	prod. qual.	00031	VT000312	15-80
		<i>Pseudomonas aeruginosa</i>	sel. qual.	00012	VT000127	50,000-150,000
		<i>Escherichia coli</i>	sel. qual.	00025	VT000257	50,000-150,000
		<i>Enterococcus faecalis</i>	sel. qual.	00009	VT000097	50,000-150,000
Sorbitol MacCONKEY (SMAC) agar acc. ISO 16654 and FDA-BAM, GranuCult® prime	100213	<i>Escherichia coli O157:H7</i>	prod. qual.	00014	VT000143	80-130
		<i>Staphylococcus aureus</i>	sel. qual.	00034	VT000347	50,000-150,000
		<i>Escherichia coli</i>	sel. qual.	00012	VT000127	50,000-150,000
TBX (Tryptone Bile X-glucuronide) agar acc. ISO 16649, Chromocult®	116122	<i>Escherichia coli</i>	prod. quant.	00012	VT000123	80-130
		<i>Escherichia coli</i>	prod. quant.	00202	VT002023	80-130
		<i>Enterococcus faecalis</i>	sel. qual.	00009	VT000097	50,000-150,000
		<i>Citrobacter freundii</i>	spec. qual.	00006	VT000066	1,000-10,000
		<i>Pseudomonas aeruginosa</i>	spec. qual.	00025	VT000256	1,000-10,000
Tryptic Soy agar acc. EP, USP, JP, ISO and FDA-BAM, GranuCult® prime	105458	<i>Bacillus cereus</i>	prod. quant.	00001	VT000013	80-130
		<i>Bacillus subtilis</i> subsp. <i>spizizenii</i>	prod. quant.	00003	VT000033	80-130
		<i>Escherichia coli</i>	prod. quant.	00012	VT000123	80-130
		<i>Listeria monocytogenes</i>	prod. quant.	00021	VT000213	80-130
		<i>Staphylococcus aureus</i>	prod. quant.	00034	VT000343	80-130
VRB (Violet Red Bile Lactose) agar acc. ISO 4832 and FDA-BAM, GranuCult® prime	101406	<i>Escherichia coli</i>	prod. quant.	00012	VT000123	80-130
		<i>Enterococcus faecalis</i>	sel. qual.	00009	VT000097	50,000-150,000
		<i>Pseudomonas aeruginosa</i>	spec. qual.	00025	VT000256	1,000-10,000
VRBD (Violet Red Bile Dextrose) agar acc. EP, USP, JP and ISO 21528, GranuCult® prime	110275	<i>Escherichia coli</i>	prod. quant.	00012	VT000123	80-130
		<i>Salmonella Enteritidis</i>	prod. quant.	00030	VT000303	80-130
		<i>Enterococcus faecalis</i>	sel. qual.	00009	VT000097	50,000-150,000
XLD (Xylose Lysine Deoxycholate) agar acc. ISO 6579, GranuCult® prime	105287	<i>Salmonella Enteritidis</i>	prod. quant.	00030	VT000303	80-130
		<i>Escherichia coli</i>	sel. qual.	00012	VT000127	50,000-150,000
		<i>Enterococcus faecalis</i>	sel. qual.	00009	VT000097	50,000-150,000
Yeast Extract agar acc. ISO 6222, GranuCult® prime	113116	<i>Escherichia coli</i>	prod. quant.	00012	VT000123	80-130
		<i>Bacillus subtilis</i> subsp. <i>spizizenii</i>	prod. quant.	00003	VT000033	80-130

**\*abbreviations:**

prod. = productivity

sel. = selectivity

quant. = quantitative

qual. = qualitative

spec. = specificity

WDCM = World Data Centre for Microorganisms

CRM = Certified Reference Materials

CFU = Colony Forming Units
