

See the difference.

The IDEXX UV Viewer PLUS.

Sharper results, zero distractions.

The UV Viewer PLUS™ cabinet blocks ambient light and illuminates your samples from all angles, allowing you to confidently interpret fluorescent results in less time.

Streamline your workflow.

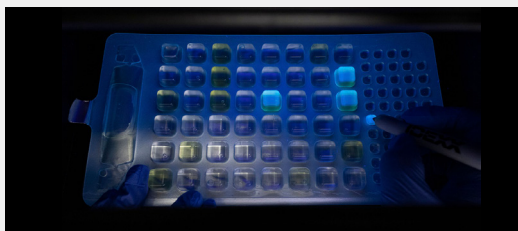

The spacious viewing area fits two Quanti-Tray® trays, so you can read results faster, speeding up your workflow.

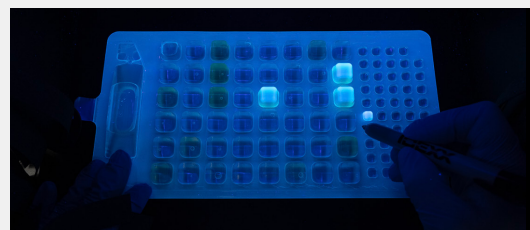

Long-lasting, energy-saving LEDs.

Energy-efficient UV LED lights last longer, saving you from the hassle of annual replacements.

Purpose-built for an easy read.

Traditional UV viewing cabinets let in ambient light and have inconsistent UV coverage, making weak positive results harder to read and potentially leading to additional incubation time.

With an angled viewing port and uniquely designed curtain, the UV Viewer PLUS reduces ambient light, making reading results quicker and objective.
